DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-5 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claims 1 and 3, what are the "inner walls" and what elements does it consist of? Same for outer wall.

Regarding claim 2, how does this claim further limit claim 1?

Specification

The specification is objected to as failing to provide proper antecedent basis for the claimed subject matter. See 37 CFR 1.75(d)(1) and MPEP § 608.01(o). Correction of the following is required: inner walls, outer wall, first passageway, second passageway, outer region, inner region are not supported in the specification. It is applicant's duty to ensure all claim limitations are supported in the written description.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-5 are rejected under 35 U.S.C. 102(b) as being anticipated by Nakamoto (JP 5071492).

Referring to all embodiments, specifically figure 4 and the prior art shown in figure 5, Nakamoto teaches a pump comprising a pump housing having an outer wall 10, 60; a rotor 64 (impeller 18) positioned within the pump housing; inner walls including 60a, 62, 20, 16 (bearing), etc. within the pump housing that "surrounds at least a portion of the rotor"; an inner region between the rotor and inner walls in communication with the first passageway and further defining an outer region between the outer wall and the inner wall in communication with a second passageway. It is noted that Nakamoto makes a clear distinction between impeller 18 and rotor 64. The device of Nakamoto can be described as both a centrifugal pump and an axial flow pump. Applicant's recitation of centrifugal and axial does not add additional elements and only limits the preamble.

Conclusion

Applicant's amendment including the deletion of concentric inner and outer passageways necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the

Art Unit: 3738

shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
